# Polygrammaticalization in the history of a motion verb: evidence from the verb $\pi \alpha$ in the 15<sup>th</sup> century and Cretan Renaissance<sup>\*</sup>

Aglaia G. Trigka University of Patras, Sorbonne Université aglaiatrigka@gmail.com

## Περίληψη

Είναι ευρέως γνωστό ότι τα ρήματα κίνησης (motion verbs) δε φέρουν μόνο την πρωτοτυπική σημασιολογική ιδιότητα της κίνησης από/προς ένα στόχο, αλλά μπορούν επίσης να χρησιμεύσουν και ως γραμματικοί δείκτες μελλοντικής αναφοράς. Όσον αφορά την Ελληνική, η διαχρονία του ρήματος κίνησης 'πηγαίνω' δεν έχει μελετηθεί ενδελεχώς. Σε αυτό το άρθρο, εστιάζουμε στις συντακτικές και σημασιολογικές ιδιότητες αυτού του ρήματος που αποτελεί τυπικό παράδειγμα Γραμματικοποίησης. Για την επίτευξη του στόχου, χρησιμοποιούμε ένα σώμα κειμένων που προέρχεται από την Κρητική Αναγέννηση και δύο κείμενα του 15<sup>ου</sup> αιώνα (Ιστορία και όνειρο, Ρίμα παρηγορητική) όπου, πρώτη φορά, επισημαίνονται μερικές ενδιαφέρουσες δομές και σημασίες.

Λέζεις-κλειδιά: γραμματικοποίηση, ρήματα κίνησης, Κρητική Αναγέννηση, πάω - πα

### 1 Introduction

The study of the diachronic evolution of motion verbs has long been one of the most popular research objects in the field of morphosyntactic change. This is firstly due to the typological study of languages, which has made it clear that many motion verbs, coming from languages of different linguistic families, are the source of grammatical constructions with common semantic content, like future reference (Talmy 1975, Bybee, Pagliuca and Perkins 1991); and secondly, to the study of the phenomenon of grammaticalization, in which specific verbs (or constructions) acquire grammatical content in combination with the necessary changes at all linguistic levels (phonological, morphological, semantic, syntactic) (Heine and Kuteva 2002).

It is also known that the English language, on which the above studies were largely based, has a well-known future reference construction derived from 'be going to'<sup>1</sup>, which is the main object of a variety of studies (Bourdin (2008), Fernand (1938), Fischer et al. (2000), Danchev and Kytö (1994), Traugott and Dasher (2001) and Budts and Petré (2016)). However, there is a lack of systematic research of Greek motion verbs and especially of the verb  $\pi\eta\gamma\alpha i\nu\omega$  'go', which has developed some very interesting syntactic and semantic properties in Modern Greek, apart from the

<sup>&</sup>lt;sup>\*</sup> This work was supported by K. Karatheodoris 2017 research program, funded by the K. Karatheodoris Foundation under Grant No 80638. I am immensely grateful to the audience for their helpful comments and questions during the Conference, although any errors are my own.

<sup>&</sup>lt;sup>1</sup> Many linguists have often debated why motion verbs participate in the grammaticalization of tense. Heine (2003: 594) has already argued that *"future tenses are primarily derived from motion schemas (X goes to / comes to Y) and volition schemas (X wants to Y)"*. Thus, motion verbs, and especially 'go', in certain constructions, evolve in many languages to an exponent of futurity. As Sweetser has observed (1988: 392) *"The suggested reason is that 'go', which expresses movement from proximal to distal in space, can easily shift to indicate 'movement away from the present time'"*.

established meaning of motion from or towards a goal, as shown in the following examples<sup>2</sup>:

(3)Πήγε παιχνίδι μέσα να χάσει το από τα χέρια του Wentprt losethe game inside from the hands him 3rd 3<sup>rd</sup> sg subj.

'He almost lost a game that was practically his.' ('avertive future')

Although, generally, my overall research starts from the 11<sup>th</sup> century and the Late Medieval Greek, in this paper we will focus on some texts of a very specific period, the Cretan Renaissance, where various and interesting constructions with  $\pi\eta\gamma\alpha i\nu\omega$  'go' appear. More precisely, we will focus only on the form  $\pi\alpha$ , a short form of  $\pi\dot{\alpha}\omega$  that derives from the verb  $\pi\eta\gamma\alpha i\nu\omega$ . The reason for this specific interest is the fact that the form  $\pi\alpha$  offers some special syntactic and semantic constructions that we will examine in the following sections.

The data for this study come from a literary corpus between the 15<sup>th</sup> and 17<sup>th</sup> century<sup>3</sup>, drawn from Thesaurus Linguae Graecae (TLG)<sup>4</sup>. These texts belong to different literary genres, in order to examine whether genre plays any role in the various morphosyntactic constructions. However, in some examples, the ambiguity of the meaning was very high, thus it was quite difficult to categorize the meaning. On the whole, ten (10) literary texts<sup>5</sup> were examined, which provided 135 tokens of the verb.

In this paper, section 2 consists of a brief theoretical presentation of the phenomenon of grammaticalization and review of existing analyses on  $\pi\eta\gamma\alpha i\nu\omega$  'go'. So, we will present the evolution of the verb over the centuries, from a morpho-

two comedies: Κατζούρμπος (27 tokens), Στάθης (13 tokens)

one erotic poem: Ιστορία και Όνειρο (2 tokens)

<sup>&</sup>lt;sup>2</sup> In this section, the examples (1), (2) and (3) are my own.

<sup>&</sup>lt;sup>3</sup>According to Holton (1991), the artistic and literary period of the Cretan Renaissance mainly covers the period from the 16th to the 17th century. But, in this paper, we also examine two texts ( $Pi\mu\alpha$   $\pi\alpha\rho\eta\gamma\rho\eta\tau\iota\kappa\dot{\eta}$  and  $I\sigma\tau\rho\dot{\eta}\alpha$   $\kappa\alpha\iota$  ( $D\nu\epsilon\iota\rho\sigma$ ) from the early medieval texts from Crete (15<sup>th</sup> century) because of their interesting constructions with the verb  $\pi\eta\gamma\alpha\dot{\iota}\nu\omega$  'go'.

<sup>&</sup>lt;sup>4</sup>The literary texts are the following (in brackets are shown the tokens of overall  $\pi\alpha$ -constructions in the text):

three tragedies: Ζήνων (6 tokens), Βασιλεύς ο Ροδολίνος (4 tokens), Ερωφίλη (7 tokens)

one religious drama: Η θυσία του Αβραάμ (18 tokens)

one religious poem: Ρίμα παρηγορητική (1 token)

one pastoral drama: Πανώρια (10 tokens)

one narrative poem: Κρητικός πόλεμος (47 tokens)

<sup>&</sup>lt;sup>5</sup>Although one of the most famous literary texts of the Cretan Renaissance is  $E\rho\omega\tau\delta\kappa\rho\tau\sigma\varsigma$ , here it is not examined as it is excluded from TLG.

phonological point. In section 3, our particular goal is to highlight the relation between syntax and semantics. Thus, we examine a collection of data from our corpus, in order to present the main syntactic constructions and the different meanings of the verb  $\pi\eta\gamma\alpha i\nu\omega$  'go' in Cretan Renaissance. A number of unknown semantic and syntactic properties of the different constructions from the texts of the Cretan Renaissance will be shown. Finally, some conclusions are drawn in the last section.

### 2 Previous analyses

Generally, grammaticalization is the process by which a lexical element is converted to a grammatical one<sup>6</sup>. An interesting but not extensively yet studied example from the history of Greek is the evolution of the verb  $\pi\eta\gamma\alpha i\nu\omega$  'go', from a typical motion verb to a marker of various grammatical meanings. Despite its high frequency of use, its semantic and syntactic properties diachronically have not been studied.

From a morphological point of view, we would like to note that the verb  $\pi\eta\gamma aiv\omega$ is a variant form of  $\pi \alpha \gamma \alpha i \nu \omega$ , which derives from the ancient verb  $\dot{\nu} \pi \dot{\alpha} \gamma \omega$ . Moreover,  $\pi \eta \gamma \alpha i \nu \omega / \pi \alpha \gamma \alpha i \nu \omega$  was shortened into the form  $\pi \dot{\alpha} \omega$ , in which the form  $\pi \alpha$  originates. Jannaris (1897) presents a rather etymological account, noting only that  $/\dot{\upsilon}/\pi\dot{\alpha}(\gamma)\omega$ derives from  $\dot{\upsilon}\pi\alpha\gamma\dot{\alpha}\gamma\omega$ . This form produces the new present  $\pi\alpha\gamma\alpha\dot{i}\nu\omega$ . On the other hand, Hatzidakis (1905) focuses on the morpho-phonetic change, explaining that  $\pi\eta\gamma\alpha i\nu\omega$  is used instead of  $\dot{v}\pi\dot{\alpha}\gamma\omega$ , after the loss of the aorist  $\ddot{\eta}\gamma\alpha\gamma\sigma\nu$ . A more elaborated description is found in Horrocks (2010). According to him (2010: 237), originally, "the aorist of this verb was  $\dot{v}\pi$ - $\dot{\eta}\gamma\alpha\gamma$ -ov, but the clumsy root reduplication was dropped in popular speech to give  $(b)\pi$ - $\tilde{n}y$ - $\alpha$  ( $\pi \dot{n}y\alpha$  in modern greek), with subjunctive  $(b)\pi$ - $\dot{\alpha}(y)$ - $\omega$  (modern  $\pi \dot{\alpha} \omega$ ). Since this last was homophonous with the present indicative, a new present  $(\dot{v})\pi$ - $\alpha\gamma$ - $\alpha'\gamma\omega$  was built to the stem  $\dot{\nu}\pi\dot{\alpha}\gamma$ - and subsequently this was remodeled on the basis of the aorist indicative  $\varepsilon \pi \eta \gamma \alpha$ , to give modern  $\pi \eta \gamma \alpha i \nu \omega$ ." As far as the remaining literature is concerned, Grammenidis (1993) develops a rather sociolinguistic account of the verb  $\pi \dot{\alpha} \omega v \alpha$  and Konta (2002) examines the origin and the use of the Modern Greek construction  $\pi \dot{\alpha} \omega v \alpha$  as future marker, employing a great variety of examples. Thus, both of them employ solely synchronic and not diachronic data, as shown. The first systematic attempt to study the semantic and syntactic properties of constructions with the verb  $\pi \eta \gamma \alpha i \nu \omega$  'go' diachronically is found in Tsakali (2003). She takes as the starting point the Ancient Greek language and reaches to the Cretan Renaissance in order to carry out a diachronic presentation of the verb in relation to the grammatical constructions it formed. But she does not go into any detail, hence the need for the analysis presented below.

### 3 The main constructions and the different meanings

As is already argued in section 1, we will focus on the form  $\pi \alpha$  and we will make some remarks on its syntactic and semantic properties. So, as the data indicate, two basic syntactic constructions exist:

1.  $\Pi \dot{\alpha}$  (clitic / pronominal element) + subjunctive

<sup>&</sup>lt;sup>6</sup>A classic definition comes from Kuryłowicz: "Grammaticalization consists in the increase of the range of a morpheme advancing from a lexical to a grammatical or from a less grammatical to a more grammatical status, e.g. from a derivative formant to an inflectional one." (Kuryłowicz 1975[1965]: 52)

constructions highlight the existence of different meanings too, as shown below:

'I am going to find this old man and pay him.'

(Πανώρια, 277)

# **b.** Proximate future

Except for the basic meaning of motion towards a goal, another typical meaning exists, this one of proximate future. The tendency to denote an act in the near future by using the verb 'go', is observed not only in Greek, but also in other languages such as English, as indicated above, in the introduction.

In these three examples, the meaning that something 'is going to happen in the near future' is developed, although example (9) still maintains some semantic element of motion. In the examples (10) and (11), the verb  $\pi\alpha$  has nothing to add in the meaning

<sup>&</sup>lt;sup>7</sup> In this example, we consider as future marker only the second construction with  $\pi \alpha$ :  $\pi \alpha \nu \alpha \delta \omega \sigma \omega$ .

of motion, thus it emphasizes the meaning of proximate future. In addition, especially in the example (11), the verb  $\pi \alpha$  serves as a future marker. In this case, the short form  $\pi \alpha$  constitutes a grammatical element (and not a traditionally lexical one, this one of the typical motion verb  $\pi \dot{\alpha} \omega - \pi \alpha$ ) that emphasizes the meaning of proximate future.

Finally, an interesting observation can be made, as far as the form  $\pi \alpha$  is concerned. More precisely, the data illustrate that the short form  $\pi \alpha$  of the verb  $\pi \dot{\alpha} \omega$  is always in the third singular person. Also, although it is difficult to know how the degree of grammaticalization is actually measured, it is argued that in these examples, an almost full procedure of grammaticalization takes place. The lexical element  $\pi \alpha$  has lost many of its grammatical properties (tense, person etc.) and follows a 'path' towards a particle-like status. It is undoubtedly a grammatical element that cannot be considered as a verb, like the future marker  $\theta \alpha$  in Modern Greek which is not a verb anymore (Markopoulos, 2006). This extension of the full category 'verb' into a secondary category such us 'particle' constitutes exactly the case of de-categorialization, one of the principles of grammaticalization, as defined by Traugott and Heine (1991). This assumption is also strengthened by the other meanings of  $\pi \alpha$ , discussed below.

#### c. Possibility

(14) M<sub>η</sub>ν μισέψεις από πα πα και τα go-3rd leave-2<sup>nd</sup> Neg. from here and the sg sg πλευρά σπάσω! σου sides your break-1st sg

'Don't you leave me here or I'll break your ribs!'

(Κατζούρμπος, Ε' 296)

In the examples above, the prototypical meaning of motion is undoubtedly submerged and we have probably the evolution of  $\pi \alpha$  into a particle with the meaning of 'maybe' and 'by chance'. This meaning of possibility may be also found in negative context, as shown in the example (12). Also, as far as the example (13) is concerned, it is observed that the hypothetical particle  $\alpha v$  is used. Denizot and Vasilaki (2017) have argued that the prototypical meaning of the "presumptive", the "possibility" starts from the hypothetical system, as it is used in the example (13).

But the most interesting fact in this construction is that it shows evidence of a particle and not of a verbal element, because of the loss of all the prototypical elements of a verb (conjugation, verbal morphology etc.).

As presented in the examples above, there are two meanings -except for the traditional one of motion-, found in two different syntactic constructions. But it is questioned now whether these meanings occur in both constructions. Thus, the following tables present the relation between the two syntactic constructions and the meanings:

Construct ion: Πα να+ subjunctiv e	Ιστορί α και όνειρο	Ρίμα παρηγ ορητικ ή	Κα τζ.	Ερω φ.	Παν.	Ζήνων	Ουσί α του Α.	Στά θης	Ροδ ολ.	К. П.	
motion	2	-	2	5	3	2	12	5	1	25	57
proximate future	-	-	2	-	2	1	5	-	-	-	10
possibility	-	-	1	-	-	-	1	2	-	1	5
	2	-	5	5	5	3	18	7	1	26	

Table 1 | The relation between  $\pi \alpha v \alpha$ + subjunctive and the meanings.

Construct ion: Πα + subjunctiv e	Ιστορ ία και όνειρ ο	Ρίμα παρηγ ορητικ ή	Κατζ.	Ερω φ.	Па v.	Ζήνων	Ουσία του Α.	Στάθ ης	Ροδ ολ.	К. П.	
motion	-	1	8	-	1	3	-	2	3	17	35
proximate future	-	-	10	2	3	-	-	-	-	4	19
possibility	-	-	4	-	1	-	-	4	-	-	9
		1	22	2	5	3	-	6	3	21	

Table 2 | The relation between  $\pi \alpha$  + subjunctive and the meanings.

As far as the different meanings are concerned, it is observed that in most cases they are not used in the same syntactic constructions. For instance, the meaning of proximate future is expressed, in totally nineteen (19) examples, through the construction of  $\pi \alpha$  + subjunctive, while this meaning is found in ten (10) examples in construction of  $\pi \alpha v \alpha$  + subjunctive. As for the meaning of possibility, it is found in both syntactic constructions too, but it is more common in the construction of  $\pi \alpha$  + subjunctive: It is found in totally nine (9) examples, while the construction of  $\pi \alpha v \alpha +$ subjunctive is used for five (5) examples. Another interesting point is that these semantic properties are not illustrated in  $K\rho\eta\tau\iota\kappa\delta\varsigma$  Πόλεμος. In the latest text of Cretan Renaissance<sup>8</sup>, the verb  $\pi \alpha$  exhibits almost exclusively the traditional meaning of motion and there are only a few examples with the meaning of proximate future and possibility, in both syntactic constructions, emphasizing the use of the construction  $\pi \alpha$  + subjunctive. This maybe has a strong relation with the genre of the text, as it constitutes the less 'sophisticated' in comparison with the others (Markopoulos, 2006). Thus, literal meanings, such us the prototypical one of motion, are preferred. Finally, it is argued that the different semantic properties of  $\pi \alpha$  in both syntactic constructions are not found in texts of the 15<sup>th</sup> century. Thus, it is argued that Cretan Renaissance constitutes a focal point for the appearance of different constructions with  $\pi \alpha$ . Finally, in the table below, is shown the frequency of use of the meanings of proximate future and possibility in the texts and as it is concluded, the verb  $\pi \alpha$  expresses more often the meaning of proximate future:

Meanin g	Ιστορ ία και όνειρ ο	Ρίμα παρηγορ ητική	Κα τζ.	Ερω φ.	Παν.	Ζήνων	Θυ σία του Α.	Στάθ ης	Ρο δολ	К П	
motion	3	1	10	5	4	5	12	7	4	42	93
proxima te future	-	-	12	2	5	1	5	-	-	4	29
Possibili ty	-	-	5		1		1	6	-	1	14
	3	1	27	7	10	6	18	13	4	47	

 Table 3 | The frequency of use of meanings

### 4 Conclusion

This paper has shown that the short form  $\pi \alpha$  of the motion verb  $\pi \dot{\alpha} \omega$ , derived from  $\pi \eta \gamma \alpha i \nu \omega$ , participates in two syntactic constructions (one with the particle  $\nu \alpha$  and another without it) and expresses other grammatical meanings, apart from the prototypical one, the meaning of motion. These are the meanings of proximate future and possibility. Also, it is argued that the short form  $\pi \alpha$  is undergoing its own development, as it is a grammatical element and not a lexical one, with its verbal morphology already lost. More precisely, the data drawn from the Cretan Renaissance illustrate that this form in the third singular person has a particle-like status. Finally, it is argued that both semantic properties participate in both syntactic constructions, but with different frequencies of use.

<sup>&</sup>lt;sup>8</sup> As noted in Alexiou and Aposkiti (1995), *Κρητικός Πόλεμος* was written between 1669/1670 and 1677.
